## VALUE PROPOSITION

**“PROTECTING LIFE IS OUR MAIN OBJECTIVE, YOUR RESOURCES ARE JUST A CONSEQUENCE...”**

If I say that we can prevent millions of deaths from respiratory illnesses and reduce billions of USD in maintenance expenses on air conditioning system failures in equipment and machinery, I would be interested

Currently, in mining, forestry and civil works on average, \$ 150,000 USD per year is spent on equipment due to a failure in air conditioning, which exposes workers to serious health risks.

We developed and patented an electronic device that takes control of the equipment's computer by automating and optimizing the air conditioning system. Protecting the air quality inside the operating room by avoiding the risk of contracting lung diseases, going against the World Health Organization's goals of eradicating Silicosis before 2030, plus the device reduces more than \$ 125,000 USD annually per equipment.

Our closest substitutes are replacement teams or mechanics on site, who do not guarantee to avoid failures or reduce costs, in addition to inevitably exposing the health of workers.

Komat'su Chile entrusted the life of its operators to Nodust, saving more than \$ 20 MM USD in the first 3 years for its fleet of 250 trucks, Mercedes Benz Chile certified and supported our device and GlobalTech Brigde, Silicon Valley, EE.UU., they trust us to continue developing and innovating.

We invite you to be part of our concept ...
